CHEMICAL COMPATIBILITY GUIDE

⚠ WARNING

This chemical compatibility table is based on various document reports with information believed to be accurate and reliable to the best of our knowledge and is to be used only as a guide in selecting materials for appropriate chemical compatibility. Ratings of chemical behavior listed in this chart may apply to a limited exposure period. Tuthill has no knowledge of possible effects beyond this period. These suggestions and recommendations cannot be guaranteed since the conditions of use are beyond our control. We recommend testing the chemicals under the specific conditions of your application to determine suitability to the specific environment before permanent installation. Tuthill does not warrant (neither express nor implied) that the information in this chart is accurate or complete or that any material is suitable for any purpose.

⚠ DANGER

Chemicals must be handled by qualified personnel only. Variations in chemical behavior during handling due to factors such as temperature, pressure, and concentrations can cause equipment to fail, even though it passed an initial test. Use suitable guards and/or personal protections when handling chemicals to prevent serious injury.
